Follow those carefully. * In each of the questions 1 to 50, pick one of the alternatives from (1), (2), (3), (4), (5)which is correct or most appropriate and mark your response with a cross (X) in accordance with the instructions given on the back of the answer sheet. 1. Who is considered as the first computer programmer? (1) John Von Neumann (2) Blaise Pascal (3) Charles Babbage (4) Ada Augesta Lovelace (5) John Presper Eckert 2. Which of the following technologies has been used in the Third Generation Computers? (2) Large Scale Integration (LSI) (1) Integrated Circuits (ICs) (4) Transistors (3) Micro Processors (5) Vacuum Tubes 3. "The data in is read by using the Laser technology" Which of the following is most appropriate to fill the blank in the above statement? (1) Floppy Disk (2) Magnetic Tape (3) Compact Disk (4) Magnetic Hard Disk (5) Flash Memory 4. Consider the following statements about data and information. A The symbols '101011101 B Numbers, characters and images C - Facts derived from a study D - Facts that have been processed in such a way as to be meaningful to the person who receives it Which of the above statements best describe/s 'information'? (1) D only. (2) A and B only. (3) C and D only. (4) A, B and C only. (5) B, C and D only. 5. The binary number equivalent to 37_{10} is (4) 0110110. (5) 0110111 (1) 0100101 (2) 0100111 (3) 0100100. 6. In computer networks, acronym DHCP stands for (2) Dynamic Host Configuration Protocol. (1) Dynamic Host Control Protocol. (3) Domain Host Configuration Protocol. (4) Dynamic Host Configuration Practice. (5) Dynamic Host Control Parameters. 7 Which of the following statements is correct about relational databases? (1) The primary key of a table is selected from alternate keys. (2) Duplicate values are not allowed in a foreign key field of a table. (3) A table cannot be created without a primary key. (4) A foreign key of a table should be the primary key of another table. (5) A table should have alternate keys. 8. What is the function of a DNS in a Computer Network? (2) Translates domain names to IP addresses (1) Assigns IP addresses (3) Protects a network from viruses (4) Provides directory services to users (5) Connects multiple computer networks together.

[see page two

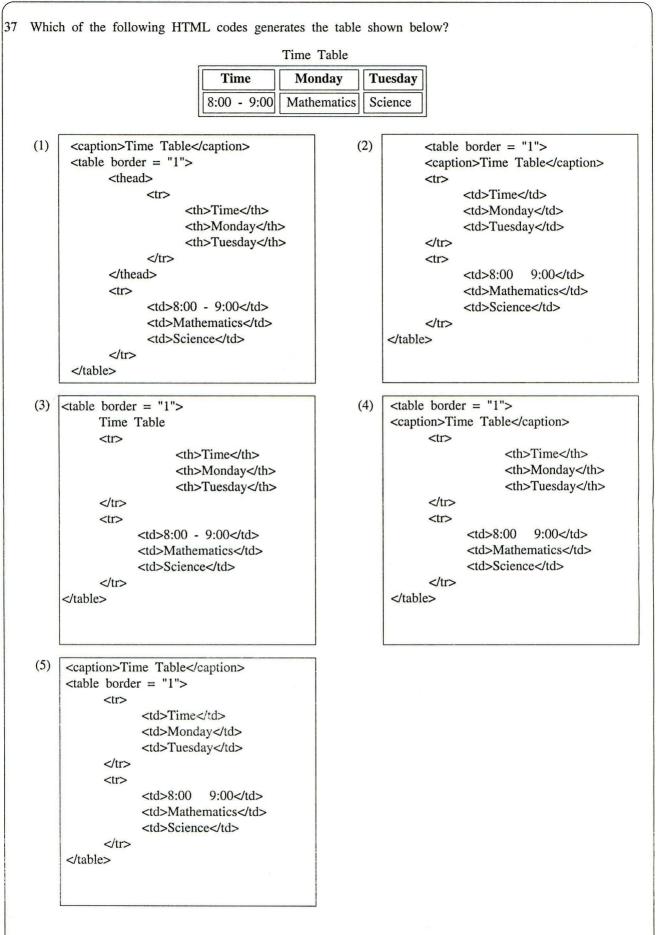

| 9. | The command that can be used to check the network configuration of a computer is (1) traceroute. (2) netstat. (3) hostname. (4) ipconfig. (5) ping. |
|-----|---|
| 10. | Human blood circulatory system can be classified as a(1) natural and closed system.(2) artificial and closed system.(3) artificial and open system.(4) natural and open system.(5) natural and artificial system. |
| 11 | Which of the following best describes a non-functional requirement of a mobile phone? (1) Sending a short message (2) Receiving a telephone call (3) Selecting a number from the contact list (4) Making a telephone call (5) Having one year warranty for the battery |
| 12. | An electronic washing machine can be best considered as a/an(1) Information system.(2) Automated system.(3) Expert system.(4) Management support system.(5) Transaction processing system. |
| 13. | Which is the correct mark up for a comment in an HTML document?(1) Districts of Sri Lanka</td (2) Districts of Sri Lanka (3) //Districts of Sri Lanka(4) <* Districts of Sri Lanka *>(5) Districts of Sri Lanka ! |
| 14. | The required minimum and maximum working hours per day for an employee in a factory are 5 and 12respectively Which of the following is the most appropriate validation check to ensure that the integer valueentered as the working hours, through a web-based form, is correct?(1) Range(2) Length(3) Type(4) Numeric value(5) Number of digits |
| 15. | $144_{8} + 175_{8} = (1) 225_{8} (2) 341_{8} (3) 441_{8} (4) 531_{8} (5) 314_{8}$ |
| 16. | Which of the following statements is correct about IP addresses and subnet masks? (1) 192.248.32.3 is a Class B IP address. (2) A network with a subnet mask 255.255.255.248 can accommodate six hosts. (3) An IP address consists of 16 bits. (4) 10.32.1.5 is a Class C IP address. (5) 255.255.255.0 is a Class C IP address. |
| 17 | The network layer of the OSI reference model provides(1) error correction.(2) inter-process communication.(3) flow control.(4) routing of data packets.(5) error detection. |
| 18. | The type of operating system that is most suitable for an automated air traffic control system is(1) multi-user multi-tasking.(2) single-user multi-tasking.(3) real time.(4) single-user single-tasking.(5) multi-threading. |
| 19. | What is the result of evaluating the Python expression $10 \% 3$? (1) 0 (2) 1 (3) 2 (4) 3 (5) 10 |

20. Consider the following pseudo code: Begin total = 0For count = 1 To 10 If (count is odd) Then total = total + countEndIf Next count Display total End What is the output of the above pseudo code? (1) 10 (2) 15 (3) 20 (4) 25 (5) 55 21. Consider the following models: A Network B Waterfall C - Relational Which of the above is a / are database model/s? (1) A only. (2) B only. (3) C only. (4) A and B only. (5) A and C only. 22. Consider the following statements about Relational Databases: A table is considered as an object. A A column of data in a table is called a field/an attribute of that table. B C - A row of data in a table is called a record. Which of the above statements is/are correct? (3) A and B only. (1) A only. (2) B only. (4) A and C only. (5) B and C only. 23. Consider the following statements with respect to ER diagrams: A relationship in an ER diagram can be implemented as a table in a relational database. A B - A relationship may have attributes attached to it. C - Only two entities can be attached to a relationship. Which of the above statements is/are correct? (1) A only. (2) B only. (3) A and B only. (4) A and C only. (5) B and C only. 24. Consider the following relation: student(stdNo, name, address, nicNo, date of birth) Which of the following SQL (Structured Query Language) statements on the student relation is syntactically correct? (1) select ** from student (2) select all from student (3) select * from student (4) select stdNo.name from student (5) select stdNo; name from student 25. Consider the following database operations: A Remove records from a table B - Add new data to a table C Modify the existing data in a table Retrieve data from a table D "The SQL statements should be used to perform the database operations A, B, C and D respectively" Which of the following is most appropriate to fill the blank in the above statement? (1) delete, select, update and insert (2) delete, insert, select and update (3) select, delete, insert and update (4) insert, select, delete and update (5) delete, insert, update and select 26. What would be the result if the following Boolean expression is simplified? $F(x,y) = \overline{xy}(\overline{x} + y)(y + \overline{y})$ (1) \overline{x} (2) \overline{y} (3) x(4)(5)у

- 3

27 Which of the following Boolean expressions represents the output of the given logic circuit? $|A+B|+|B \bullet C$ $A+B \bullet B \bullet C$ R A+B $A \bullet B + B \bullet C$ C (5) $(A \bullet B) + (B + C)$ 28. The component that decodes the instructions fetched into the CPU is called the (1) Primary Memory. (2) Register Unit. (3) Control Unit. (4) ALU. (5) Program Counter. 29. Which of the following data storage devices provides the fastest random access? (1) Main memory (2) Magnetic disk (3) CD/DVD (4) Flash drive (5) Hard disk 30. A person employed in an overseas country placed an on-line order to deliver a birthday present to his mother who is living in Sri Lanka, using the web-based services of a company. This transaction of ordering the birthday present could be best classified as (1) Consumer to Retailer. (2) Consumer to Business. (3) Business to Consumer. (4) Business to Business. (5) Employee to Business. 31. Which of the following is most cost effective and secure in transmitting private and confidential messages and notices among the employees of an organization? (1) Electronic notice boards (2) Teleconferencing (3) e-mail (5) A website (4) A social network 32. Consider the following characteristics A Autonomous B - Performs in dynamic environments C - Functions restricted to a time period D - Interacts with highly increasing information Which of the above are characteristics of a Software Agent? (1) A and B only. (2) A and C only. (3) A, B and C only. (4) A, B and D only. (5) B, C and D only. 33. Ubiquitous computing will be useful in applications such as (1) Customisation of a domestic environment. (2) Processing of large scale examination results. (3) Auto Teller Machine (ATM). (4) Point of Sales (POS) Machine. (5) Controlling a wall clock. 34. Consider the following terms A - Input B - Output C - Process D - Storage Which of the above are essential for a system? (1) A and B only. (2) A, B and C only. (3) A, C and D only. (4) B, C and D only. (5) All A, B, C and D. 35. "Video conferencing is best described as a/an discussion through between two or more individuals in different locations." Which of the following is the most appropriate answer to fill the blanks in the above statement? (1) video, TV (2) audio, telephone (3) audio, network (4) audio visual, TV (5) audio visual, network 36. Consider the following URL. http://www.schools.org/2012/lessons/index.html Which of the following indicates the protocol of the above URL? (1) http (2) html (3) www (5) www.schools.org (4) org

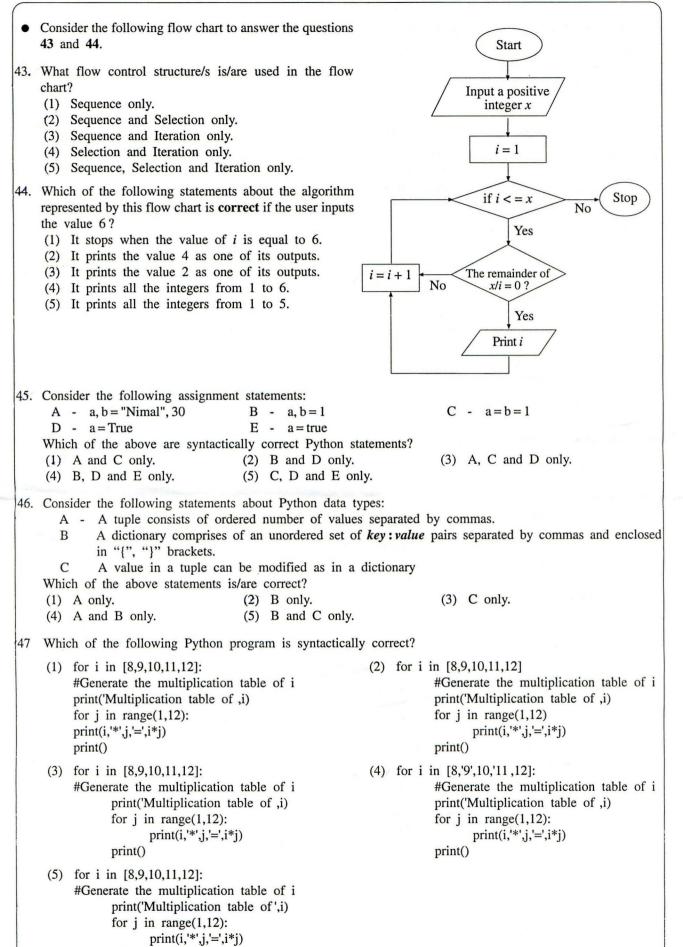

[see page six

5

38. Consider the following XML documents: <?xml version="1.0"?> B - <?xml version="1.0"?> A <country> <name>Sri Lanka</name> </country> <country> </country> C - <?xml version="1.0"?> D - <?xml version="1.0"?> <country> <name> <name>Sri Lanka</name> <country>Sri Lanka</country> </country> </name> Which of the above has/have correct XML syntax? (1) A only. (2) D only. (3) B and C only. (4) A, C and D only. (5) B, C and D only. 39. The HTML tag Sri Lanka renders the document named "sriLanka.html" by a browser on (1) the same frame. (2) a new window. (3) the same window. (4) a frame named " blank" (5) a window named " blank" 40. Consider the following statements about HTML A - A well-formed HTML document should comprise two sections, a head and a body B An HTML document is a computer program. C - White spaces, tabs and blank lines can always be used to format the display of a document. D - The content of the body section is displayed by browsers. Which of the above are correct? (1) A and D only. (2) B and C only. (3) B and D only. (4) A, C and D only. (5) B, C and D only. 41. The main advantage of creating more than one partition in a hard disk is the (1) separation of the operating system and program files. (2) ability to retrieve files efficiently. (3) easiness of making directories and subdirectories. (4) easiness of creating multiple users. (5) easiness of taking backups of selected files. 42. Which of the following statements about relational databases is correct? (1) A value of a composite key of a table can be null. (2) Null values are allowed in any column of a table. (3) Two or more columns of a table can be combined to create the primary key. (4) Values of a foreign key of a table cannot be updated. (5) Once created, the structure of a table cannot be altered.

Important :

- * This question paper comprises of two parts, Part A and Part B. The time allotted for both parts is three hours.
- * Use of calculators is not allowed.

PART A — Structured Essay : (pages 02 - 07)

Answer all the questions on this paper itself. Write your answers in the space provided for each question. Note that the space provided is sufficient for your answers and that extensive answers are not expected.

PART B — Essay : (pages 08 - 11)

This part contains six questions, of which, four are to be answered. Use the papers supplied for this purpose.

- * At the end of the time allotted for this paper, tie the two parts together so that Part A is on top of Part B before handing them over to the Supervisor.
- * You are permitted to remove only Part B of the question paper from the Examination Hall.

For Examiner's Use Only

3. (a) An application running in a computer refers the virtual memory address, 0100110100010111 during execution.

- (i) Calculate the maximum accessible virtual memory address space, in the above computer in Kilo Bytes?
- (ii) What is the range (starting and ending addresses) of the memory address space identified in the section (i) above?
- (iii) If a page size is 4 Kbits, how many bits are sufficient to represent the page number? Show your computation.
- (b) Assume that **A** and **B** are computers connected to **two** network segments. When the command 'ipconfig' is executed in these computers, the following information is obtained:

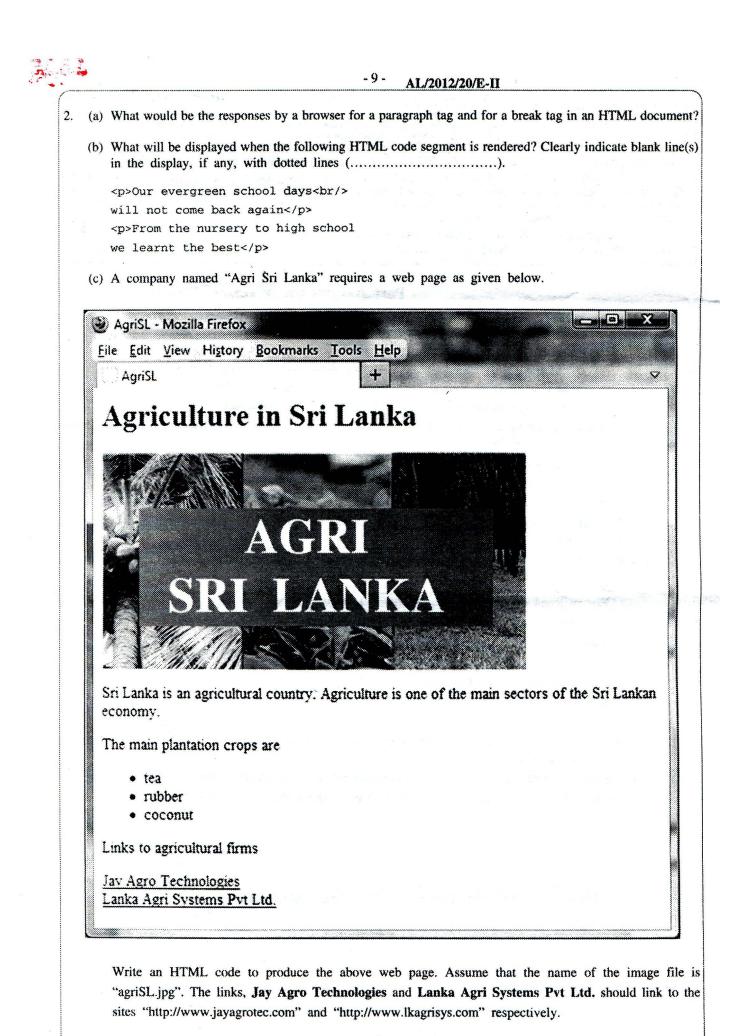

Draw a network diagram for the above two network segments so that both A and B can communicate with each other. You should clearly indicate the IP addresses of each device in the diagram.

- (c) Briefly explain the main function of each of the following systems in terms of network security.
 - (i) firewall
 - (ii) proxy server
 - (iii) honey pots

4. Consider the following ER diagram.

- (a) State the *most relevant* entity or relationship in the above ER diagram to add an attribute to represent marks obtained by a student for a subject.
- (b) Classify all the relationships in the above ER diagram as one-to-one, one-to-many or many-to-many. Justify your answer.
- (c) Write the structure of the tables including their attributes when the above ER diagram is converted to a relational database.
- (d) State the primary key for any table suggested in (c) above.
- (e) Using the tables you have suggested in (c) above, write an SQL statement to get marks obtained for the subject with the value of Subject ID AL001 by the student with the value of Student ID ST001.

[see page ten

```
5. Consider the following Python program named example.py
         datasummary = \{\}
         datakeys =
                      []
         def readdata():
             global datakeys, datasummary
             f1 = open('input.txt','r')
             line = f1.readline()
             while (line):
                  data = line.strip().split(",")
                  for dataitem in data:
                      if dataitem in datasummary:
                           datasummary[dataitem] += 1
                      else:
                           datasummary[dataitem] = 1
                           datakeys = datakeys + [dataitem]
                           f1.readline()
                  line =
             f1.close()
         def processdata():
             global datakeys
             for i in range(len(datakeys) - 1):
               for j in range(i+1, len(datakeys)):
                    if(datakeys[i] > datakeys[j]):
                      datakeys[i], datakeys[j] = datakeys[j], datakeys[i]
         def printdata():
             global datakeys, datasummary
             f2 = open('output.txt','w')
             for key in datakeys:
                  f2.write('{}-{}\n'.format(key,datasummary[key]))
             f2.close()
                                                      readdata()
         processdata()
         printdata()
    (a) What are the data types of the variables datasummary and datakeys in the above program?
    (b) Write a Python statement required to insert the program name as a comment at the beginning of the
       above program.
    (c) What is the result of execution of the command open('input.txt','r') in the above program?
    (d) Describe the main task of each of the functions readdata(), printdata() and processdata() in the above
       program.
    (e) If the content of the file input.txt is as given below, what would be the content of the file output.txt
       after the execution of this program?
              a,d,b,a,n
              d,b,n,x,a
6. The Past Pupils Association (PPA) of a school has a large number of past students all over the country and
   overseas. The PPA, in collaboration with a leading local bookshop, decided to obtain support from the past
   students and other donors to increase the number of books in the library. The PPA agreed to develop a web-
   based system with on-line payment facilities for this activity. The title and the price of the required books
   for the library will be available on the website. The donors could select and pay for these required books
   available on the website. When a payment is made, this information will be sent to the bookshop for the
   delivery of the selected books to the school library.
    (a) Give two advantages of the suggested on-line method over traditional methods for book collection.
    (b) Give one disadvantage of ordering books through the suggested website.
    (c) Explain how you could improve the website to eliminate the disadvantage given in (b) above.
```
